About us Decopuntaje.com is a site that shares information about niche topics. The main purpose of the site is to be an initial point for people who do not know about niche topics to find material related to their particular interests. We also provide information to those people who are already well familiar with niche topics, offering content that can be a helpful supplement to their knowledge. Moderate left ventricular dysfunction and ischemic stroke. The Rancho Bernardo Stroke Study. To determine whether left ventricular (LV) dysfunction is a risk factor for ischemic stroke, we studied the ischemic stroke subtypes in the Rancho Bernardo Stroke Study. Right and left ventricular function were evaluated by echocardiographic means in 592 patients with ischemic stroke and no history of cardiac disease. The overall prevalence of LV dysfunction was 20% and did not vary significantly by site of stroke. In patients with a history of stroke, LV dysfunction defined as a 50% decrease in LV fractional shortening correlated with all subtypes of ischemic stroke, including total anterior circulation, total posterior circulation, lacunar, and partial anterior circulation strokes (P = .009). LV dysfunction was associated with an increased risk of total anterior circulation (odds ratio [OR] = 2.1, P = .003) and lacunar (OR = 2.0, P = .003) strokes. Patients with total posterior circulation (OR = 2.1, P = .01) and lacunar strokes (OR = 2.6, P = .002) were significantly more likely to have LV dysfunction. In multivariate analyses, history of hypertension and male sex were significantly associated with LV dysfunction, but the association with LV dysfunction was independent of ischemic stroke site. Echocardiography may be useful in predicting which patients with ischemic stroke are more likely to have LV dysfunction and may help identify them as candidates for aggressive secondary prevention strategies. "Ray Trace with pyrimidines", AIP Conf. Proc. 1082:74-80, 2009); Thienot Perregaux, "Real-Time 3D Visualization by Time Projection", Proc. SPIE, 4611:482-488, 2002; and others. By way of example, a method for displaying a 3D volume data set with time as a 3D color chart is known. See U.S. Pat. No
